

Decathlon

Sports Shop

Watch the video on how Decathlon manage the stock control and resupply of trainers to their shops.

Your task is to explain what has happened at each stage:

1. You must refer to the computer systems
2. Think about the data that is being used
3. Remember the shop is in England and the warehouse is in France
4. Type your explanation and on the left
5. Find a suitable photo to explain what is happening.

In the Shop ~ England

Explain What Happened?	Use a Photo to Explain
Shop scan the barcode at the till Till sends code to computer system System sends description & price to till	
Customer bought shoes - purchasing Card goes into the reader Card number goes to the bank Bank confirms card Money transferred to shop	
Till system tells the shop what has been sold Till confirms quantity to computer system	
This systems knows what to order They have a database They deduct how many have been sold from the stock The software does mathematics and orders however many it thinks it needs in stock	

Connects to warehouse in France
 Warehouse gets an order from the software database
 EDI – Electronic Database Interchange – The warehouse knows exactly what has been sold in every store.

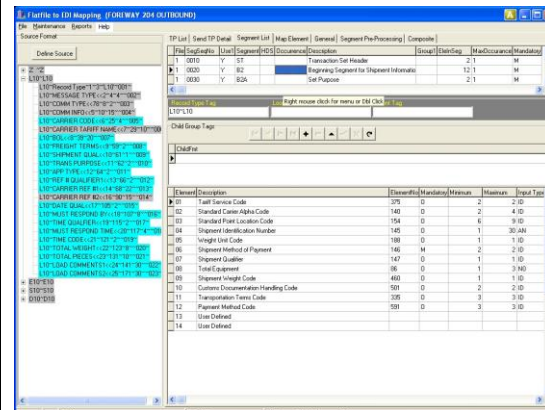

Warehouse ~ France

Explain What Happened?

System knows what has been sold in the shop
 Because of EDI
 Knows which product it needs to ship

Use a Photo to Explain

Prints a picking sheet for the warehouse people to choose the new items
 Find the product in the warehouse

Person puts products in the box
 The box is then scanned
 The database now knows what is in the box

Box has a label – says where it is going and what is in the box
 So when the box arrives, they know what is in stock because of the label

Truck ~ France

Explain What Happened?	Use a Photo to Explain
<p>Box is checked onto the truck For security So they know where their stock is</p>	
<p>Box is checked off the truck at the shop For security again So they know their stock has been dropped off and not lost or missing</p>	

Shop ~ England

Explain What Happened?	Use a Photo to Explain
<p>Box and contents are checked into shop The box is checked The shop knows exactly what is in the box because it is the box that has been check in not all the contents, that would be too time consuming.</p>	
<p>This tells the shop what new stock it has The stock in the shop goes up The stock in the warehouse goes down when the box has arrived</p>	
<p>Products go back on the shelf Because the shop know what it has in each box, they can put their stock back up on their shelves.</p>
